EDUCATION

University of Toronto Sep 2024 - Apr 2029 (Expected)

Bachelor of Applied Science in Engineering Science, Major in Electrical & Computer Engineering, Minor in Robotics & AI

- Relevant Coursework: Digital Systems (SystemVerilog, FPGA, Assembly), Electronics (analog), Deep Learning (PyTorch)

University of Waterloo Sep 2023 - Aug 2024

Bachelor of Math in Mathematics/Financial Analysis and Risk Management

- Relevant Coursework: Elementary Algorithm Design & Data Abstraction (C), Tools & Techniques for Software Dev. (CLI, Scripting, Git), Designing Functional Programs (Racket), Honours Linear Algebra, Public Speaking

SKILLS

Programming Languages: Python (PyTorch), C, C++, Java, MATLAB, RISC-V Assembly, JavaScript, Racket

Engineering Tools: CAD, Git & GitHub, HTML & CSS, LaTeX, Microsoft Office (Excel), CLI, Scripting

Embedded Systems: Arduino, ESP32, MicroPython, CircuitPython, SystemVerilog, Altium, KiCad

EXPERIENCES

IEEE - University of Toronto Branch Toronto, ON

Tech Director, Prev. Project Lead Aug 2025 - Present

- Devised the Smart Cane project pipeline, linking object detection and sensor readings to dynamic haptic feedback.
- Coordinated cross-functional contributions of a team of 5 on the Smart Cane Project, ensuring steady progress.
- Co-hosted a **Git** workshop for 100+ hackathon participants, introducing them to VCS fundamentals.
- Co-hosted an **Altium** workshop for 30+ participants, introducing them to elementary PCB schematic design.

CAROBOT Learning and Research Organization Markham, ON

Engineering Trainee May 2026 - Sept 2026, May 2025 - Aug 2025

- Enabled fully-functional, offline, browser-based access to CheeseBlocks, a block-based embedded programming tool.
- Built CheeseBlocks' data-to-inference ML pipeline: browser training with **TensorFlow.js**, on-device weight deployment.
- Simplified ESP32-S3 firmware setup with a web flasher using esp-web-tools, bundling **MicroPython**, ulab, and camera.

PROJECTS

BreadCrumb - Deep Learning Project Feb 2026 - Mar 2026

- Built a **PyTorch** model to classify and count breadboard components by drawing bounding boxes and applying NMS.
- Collected, cleaned, and labeled a custom dataset of circuit images using **Roboflow** for supervised learning.
- Applied transfer learning, iterated on model architecture, and tuned hyperparameters to achieve over 97% accuracy.

Theme Prize Winner - Resonant Evil - Audio-Based Maze Escape Arcade Game Feb 2025

- Won the Video Games Theme Prize at MakeUofT 2025 (Canada's largest makeathon), outperforming 300+ participants.
- Developed an immersive audio-driven **Arduino** arcade machine game to increase accessibility for the visually impaired.
- Implemented dynamic audio and haptic feedback that guided player navigation and heightened tension.

First Place Winner - Wannabe WALL-E - Autonomous Vehicle Challenge Feb 2025

- Won 1st place in the UTRAHacks 2025 Autonomous Vehicle Challenge, outperforming 250+ participants.
- Developed an **Arduino** autonomous robot that used ultrasonic and IR sensors to navigate through a series of challenges.
- Engineered a corrective turning algorithm to compensate for a malfunctioning motor driver, preventing critical failure.

Theme Prize Winner - Silent Night - IoT Smart Pillow Feb 2024

- Won the Smart Home Tech Theme Prize at MakeUofT 2024, outperforming 300+ participants.
- Designed an IoT smart pillow to monitor sleep conditions and correct posture using an **ESP32** and various sensors.
- Built a posture-adjustment system to improve sleep ergonomics through automated micro-corrections.

Best Use of Reve - Yours, Eventually - Anonymous Message-in-a-Bottle Site Aug 2026

- Won Best Use of Reve at SummerHacks 2026, outperforming over 100+ participants.
- Developed location-based app for leaving anonymous messages using vanilla **JS**, **HTML**, **CSS**, and **Supabase**.
- Integrated **OpenAI moderation API** into a 3-tier system to flag illicit messages before posting.
